

PMG Site Map

The proposed structure for painmgmtgroup.com, organized for two audiences and laid out for search from the URL up.

Prepared for Pain Management Group
Prepared by Clembrands
Date 31 Aug 2026
Status Rev 2.0 · for review

Every page below has a job for one of two audiences (**hospital leaders** first, **physicians & APPs** second) and a clean, descriptive URL that groups related content into topical directories search engines can understand. Existing pages that already earn search traffic keep their URLs untouched; everything renamed gets a permanent redirect.

01 The map

Ten top-level sections, nothing more than two clicks from home.

- NEW** doesn't exist on the live site today
- MIGRATE** carried forward from the current site
- FIX** exists today, but broken or incomplete

Home /

two-audience hero → routes to Partnership Model or For Providers; results, proof, and objections previewed below the fold

Partnership Model </partnership/> **NEW**

the hospital-leader path; today this content is scattered across Home, Why Choose Us, and About

- **How the Partnership Works** </partnership/how-it-works/> **MIGRATE**
4-phase timeline; 301 from </why-choose-us/>
- **The Balanced Pain Treatment Model** </partnership/balanced-pain-treatment/> **NEW**
medically / socially / financially responsible; PMG's own brand term as the URL
- **Partnership & Financial Model** </partnership/financial-model/> **NEW**
joint-venture economics, plainly explained

- **What Hospital Leaders Ask** </partnership/questions/> **NEW**
objections library; each question an H2 with a direct, quotable answer
- [↳ Schedule a Call](#)

Results & Outcomes </results/> **NEW**

PMG's proof (partnerships, encounters, retention), sourced and on the record

- **Program Dashboard** </results/dashboard/> **NEW**
outcomes tracked in the open
- **Case Studies** </results/case-studies/> **NEW**
one page per partner story, each its own indexable URL
- **Testimonials** </results/testimonials/> **MIGRATE**
3 existing named hospital-leader quotes

Our Partners </our-partners/> **MIGRATE**

URL kept as-is since it's already indexed; hub adds an interactive locations map

- **Partners by State** </our-partners/ohio/> ... ×10 **NEW**
today's JS filter becomes 10 real, indexable state pages, one per state PMG operates in

For Providers & APPs </providers/> **FIX**

the physician path, today a placeholder page; 301 from </provider-opportunities/> and </service/>

- **Why Practice With PMG** </providers/why-pmg/> **NEW**
autonomy, procedure support, schedules
- **Open Opportunities** </providers/opportunities/> **MIGRATE**
existing job-listing tool
- **Life at PMG** </providers/life-at-pmg/> **NEW**
culture, provider testimonials
- [↳ View Opportunities](#)

Pain Education </pain-education/> **MIGRATE AS-IS**

all 32 article URLs preserved exactly; the hub reorganizes navigation without touching a single address

- **Conditions** </pain-education/<slug>/> **MIGRATE**
7 articles, URLs unchanged

- **Procedures** /pain-education/<slug>/ **MIGRATE**
21 articles, URLs unchanged
- **Medications** /pain-education/<slug>/ **MIGRATE**
4 articles, URLs unchanged

About PMG /about-us/ **MIGRATE**

URL kept as-is

- **Our Mission & Story** /about-us/mission/ **FIX**
replaces today's dead Mission Statement link
- **Leadership Team** /about-us/leadership/ **NEW**
named people and credentials, the trust signal health sites are judged on
- **Internal Team Opportunities** /about-us/careers/ **MIGRATE**
non-clinical roles

News /news/ **MIGRATE**

301 from /blog/; awards and press carried over, refreshed cadence, newsletter signup

Contact /contact/ **FIX**

URL kept; rebuilt as a real conversion page

- **Hospital Inquiry Form** **NEW**
the "Schedule a Call" form
- **Find a Clinic** **MIGRATE**
routes patients to Our Partners

Footer / Utility **NEW**

- **Privacy Policy** /privacy/ **NEW**
- **Terms of Service** /terms/ **NEW**
- **HTML Site Map** /sitemap/ **NEW**

02 Why this layout wins in search

Five decisions in the structure above that were made specifically for search:

Google and the AI answer engines (ChatGPT, Copilot, Perplexity) alike.

01 Existing equity is never gambled

The 32 Pain Education articles are the site's accumulated search value, and their URLs don't change at all. [/our-partners/](#), [/about-us/](#), and [/contact/](#) also keep their addresses. Everything that does move ([/why-choose-us/](#), [/service/](#), [/blog/](#), [/provider-opportunities/](#)) gets a permanent 301 redirect, and the ~13 orphaned theme-demo pages currently indexable on the live site are retired.

02 Ten state pages replace one JS filter

Today the partner directory is a single page with a JavaScript filter, invisible to search as ten distinct topics. As real pages, [/our-partners/ohio/](#) through [/our-partners/maine/](#) each become an indexable landing page for "hospital pain management partner + state" queries, with the partner hospitals named on each. This is the map's biggest new-traffic lever.

03 URLs are topical directories, not labels

Related pages group under keyword paths ([/partnership/financial-model/](#), [/providers/why-pmg/](#), [/results/case-studies/](#)) so engines understand the site's subject clusters. PMG's own brand term becomes a URL at [/partnership/balanced-pain-treatment/](#). Careers finally moves off the current [/service/](#) address. Nothing sits more than two clicks from home.

04 The objections page is built for AI answer engines

AI search (ChatGPT, Copilot, Perplexity) cites pages that ask the buyer's question verbatim and answer it directly with specific facts. "What Hospital Leaders Ask" is structured exactly that way, each objection an H2 and each answer leading with PMG's real numbers, making it the page most likely to be quoted when an executive asks an AI about hospital pain-management partnerships.

05 Health-site trust signals are structural, not bolted on

Search holds medical sites to a higher trust bar. The map bakes the signals in as pages: a named Leadership team with credentials, sourced outcomes at [/results/](#), and real named testimonials. At build time, it adds organization and breadcrumb structured data site-wide, article markup on the education library, and an XML sitemap with crawler access configured for both Google and the AI retrieval bots.
